

surface, cover:

the unit has to be supported
at the inner side

From the outside, the front-opening counter will be pushed into the ready cut-out. In case the strength of wall (less than 500 mm) is too small, the unit needs to be supported at the inside.

The casing has to be cladded by third party at the inside.

The drive is manually.

Although the unit is produced with greatest care, after long operation repairs might become necessary. Therefore it should be possible to pull out the unit to the outside.

Subject to alterations.

Front-opening counter P7097 pass trough of folder,
with delta - execution:
