

eos® Transfer Tray P7810

Product sheet

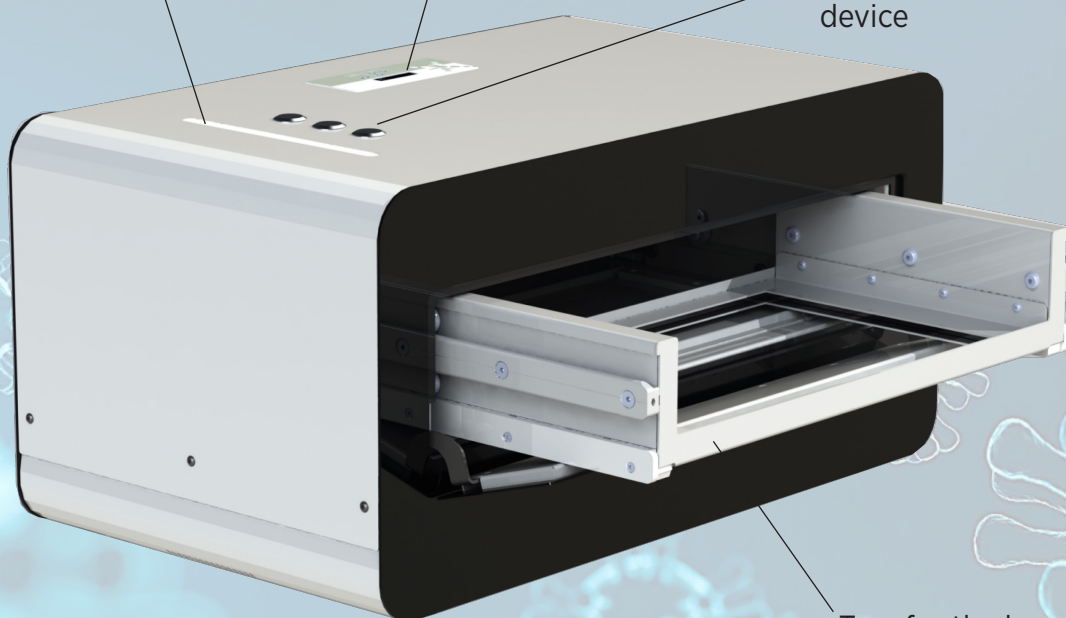

The eos® Transfer Tray P7810 is a modern transfer tray for hygienic handover of objects. It can be used flexibly and, thanks to its lightweight design, fits on almost any counter or other suitable location. No installation required.

The transfer- and cleaning process takes only seconds, with UV-lamps cleaning surfaces highly efficiently.

LEDs - indicate the cleaning process

Tray for the handover of items

SECURITY CONCEPT

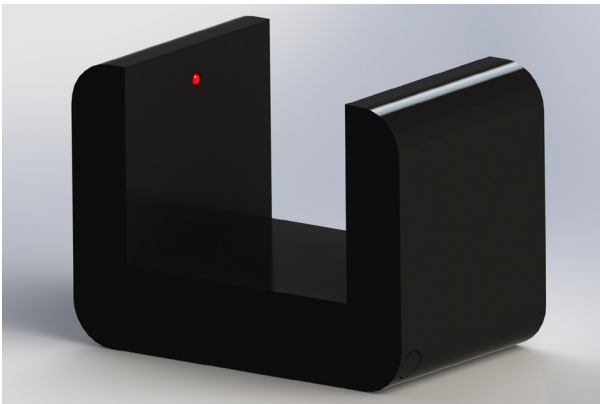

- A flap and shutter system has been implemented to cover the UV lamps while the tray of the transfer tray is either on the customer side or the operator side.
- An automatic shut off of the UV lamps provides additional protection against the UV light. As soon as one of the flaps on either side of the transfer tray is opened, the UV lamps switch off automatically.
- The tray of the transfer tray stops immediately if something blocks its travel path in order to avoid injuries.

ADVANTAGES

- Flexible use thanks to lightweight design
- No installation required
- Extremely fast handover and cleaning process (flexible adjustable)
- Highly efficient disinfection of surfaces
- Hygienic handover process
- Fewer employee absences due to illness as a result of lower risk of infection
- Highest security standards for operators and customers

ACCESSORIES

GESTURE CONTROL

The gesture control allows touch-free operation of the eos® Transfer Tray P7810.

Simple wiping movements through the U-shaped gesture control unit in the corresponding direction causes a corresponding movement of the tray of the transfer tray.

PLEXIGLAS - HYGIENIC PROTECTION (VIRAS)

The eos® Transfer Tray P7810 can be combined with a Plexiglas hygienic protection.

Hygienic protection and eos® Transfer Tray P7810 combined form a very efficient virus and bacteria protection.
